WASEEM AL-BUQAI

Back-End Developer | PHP Laravel Developer

Damascus, Syria | waseemalbuqai@gmail.com | +963 992353153 | github.com/Wasem8 |

Portfolio: waseem-albuqai.vercel.app

PROFESSIONAL SUMMARY

Motivated Back-End Developer (PHP/Laravel) and final-year Software Engineering student with hands-on internship experience building production-grade web applications. Proficient in designing clean, maintainable code following OOP, SOLID principles, and design patterns within Agile environments. Experienced in developing secure RESTful APIs, optimizing modern databases, and writing automated Unit Tests (PHPUnit/Pest). A collaborative team player with strong problem-solving skills, eager to leverage PHP expertise and familiarity with Symfony concepts to deliver high-performance solutions

EXPERIENCE

Back-End Developer Intern 2026

Widespheres · Damascus, Syria

Contributed to the full back-end development of the Syrian League Platform — a professional football tracking application (Web + Mobile) covering matches, standings, players, transfers, and personalized notifications.

- Designed and implemented a versioned RESTful API secured with JWT authentication, serving Web and Mobile clients with role-based access control and Social Login (Google/Apple).
- Built a season-aware data architecture enabling multi-season support and structured a clean, versioned API Resource layer.
- Developed a real-time Home Dashboard endpoint aggregating standings, transfers, and live status in a single optimized API call.
- Engineered automated engines (Standings, Player Stats, Transfers) using Eloquent Observers and raw SQL to maintain live data tracking.
- Built and maintained internal admin panels using **Filament**, streamlining content and league management workflows.
- Applied Clean Architecture with Service/Repository patterns separating business logic from controllers across 20+ database tables.
- Official Internship Certificate (110 hrs): widespheres.com/public/certificates/CERT-2026-XZOCOAI0

PROJECTS

MMS Backend — Mosque Management System 2026 – Present

Tech Stack: Laravel 12 · PHP 8.4 · PostgreSQL· JWT · nwidart/laravel-modules · Swagger/OpenAPI · Pest

- Architected a Modular Monolith system for managing comprehensive mosque operations, education (Halaqat), and community services across 10 isolated business domains.
- Engineered an offline-first sync pipeline for the Quranic Education module, allowing teachers to manage student profiles, attendance, and complex evaluation matrices smoothly under low connectivity.
- Optimized serverless PDF report generation (e.g., student evaluations, donation logs) under strict memory constraints (<250MB) on Vercel by decoupling heavy typography assets.
- Implemented a cloud-based storage pipeline using Supabase, generating secured, pre-signed URLs for dynamic reports and employing isolated per-user caching to prevent system bottlenecks.
- Secured a 5-role access hierarchy (Super Admin → Parent) using JWT, enforcing module-level permissions and covering all auth flows with automated Pest tests and Swagger documentation.
- GitHub: https://github.com/Wasem8/mms-backend

Distributed Systems & Architecture Simulator 2026

Tech Stack: TypeScript · Node.js · Next.js · Tailwind CSS · Promises/Async Architecture · OOP

- Architected a simulation engine implementing a Saga Transaction Orchestrator with automated backward compensation (LIFO), linear retry back-off, and strict timeout racing.
- Engineered a decoupled Load Balancer supporting 12 algorithms (e.g., Smooth Round Robin, Consistent Hashing, Least Connections) with real-time KPI metrics tracking.
- GitHub: https://github.com/Wasem8/distributed-saga-orchestrator
- Live: distributed-saga-orchestrator.vercel.app

Complaint Management System 2025

Tech Stack: Laravel 11 · MySQL · Firebase FCM · Queue Jobs · JWT

- Architected a scalable Laravel backend with 15+ RESTful API endpoints supporting 3 user roles across 20+ database tables.
- Integrated Firebase FCM for real-time push notifications and established audit logging for complaint lifecycle tracking.
- Managed concurrent updates using database locks and queued jobs, applying Clean Architecture and SOLID principles.
- GitHub: https://github.com/Wasem8/complaints-system

Beauty Center Management System — Vera_Daraa 2024

Tech Stack: Laravel · MySQL · Firebase FCM · Queue Jobs

- Delivered a management platform handling bookings, invoices, and staff with role-based access control.
- Automated background operations via queues and enhanced customer engagement using Firebase push notifications.
- GitHub: https://github.com/Wasem8/Vera_Daraa

TECHNICAL SKILLS

Languages: PHP (8+), SQL/MySQL, TypeScript, HTML, CSS

Frameworks & Libraries: Laravel (8–13) , Next.js, Node.js, Filament (TALL Stack), Blade, TailwindCSS

APIs & Backend: RESTful API Design, JWT Authentication, Firebase FCM, Socialite, Queue Jobs, Swagger

Databases: MySQL, PostgreSQL, Database Optimization, Indexing, Transactions, Eloquent ORM

Testing: Unit Testing, Feature Testing (PHPUnit / Pest)

Tools: Git, GitHub, Docker, VS Code, PHPStorm, Postman, Artisan CLI

Architecture: Clean Architecture, SOLID Principles, MVC, OOP, Design Patterns, Service/Repository Pattern, Modular Architecture, Distributed Systems Patterns

SOFT SKILLS

Problem Solving · Team Collaboration · Communication · Fast Learner · Time Management

EDUCATION

B.Sc. Software Engineering 2022 – 2026

Damascus University · Damascus, Syria

Final Year Student — Expected Graduation: 2026
